JOINT MEDIA RELEASE

Green 100 Bronze Launched to Help SMEs Access Green Procurement Opportunities in Public and Private Sector Contracts

- *Green 100 Bronze builds on the Essential level to help companies progress from sustainability reporting to action*
- *Green 100 is being progressively recognised in procurement frameworks, starting with nine private sector large enterprises ("Queen Bees") as well as under the Government's existing green public procurement frameworks for large construction services and ICT hardware tenders*
- *The Council for a Competitive Climate Transition (C3T) is rolling out AI tools and a new digital assurance capability on the national Green 100 platform to make it easier for SMEs to obtain Bronze*
- *The Government will provide grant support to help eligible companies cover training, consultancy and first-time assessment costs.*

SINGAPORE, 20 November 2026 — The Council for a Competitive Climate Transition (C3T), co-chaired by the National Climate Change Secretariat (NCCS) and Singapore Business Federation (SBF), today launched **Green 100 Bronze,** the next level under the national Green 100 movement which brings together large enterprises or "Queen Bees" to mobilise 100 or more small and medium-sized enterprises (SMEs) in their business networks to take practical steps to improve their environmental performance, strengthen their sustainability capabilities and access public and private sector procurement opportunities.

The step-up from Essential to Bronze

2 To date, 33 Queen Bees have joined the movement, and more than 280 businesses have received the Green 100 Essential Badge on the Green 100 platform.

3 Building on Green 100 Essential which was launched in May 2026, Green 100 Bronze helps SMEs progress from measuring their environmental footprint to taking practical steps to improve their sustainability performance. While Essential focuses on tracking baseline metrics such as energy, water, fuel consumption and greenhouse gas (GHG) emissions, Bronze requires SMEs to set environment targets and put in place policies and actions to manage their resource use and emissions, as well as extends tracking to include waste management.

4 Green 100 is aligned with Technical Reference 149:2026 (TR 149:2026), a framework launched by the Singapore Standards Council (SSC) to help organisations assess their environmental sustainability performance and identify areas for improvement. SMEs seeking to

obtain Green 100 Bronze must undergo independent assessments by accredited Conformity Assessment Bodies (CABs) to verify that their reported environmental data meets the Bronze requirements of TR 149:2026. These assurance statements are based on a 12-month reporting period and are subject to annual reverification.

Unlocking public and private sector procurement opportunities through Green 100

5 Companies with Bronze-level assurance statements will receive their Green 100 Bronze badge and be listed on the Green 100 Supplier Registry. As buyers, procurers and financiers use the registry as a trusted reference point to assess firms' environmental sustainability practices, companies that attain Essential and Bronze stand to unlock tangible economic benefits as C3T drives the progressive recognition of TR 149:2026 and Green 100 across public and private sector procurement:

- Nine Queen Bees – City Developments Limited, Cushman & Wakefield, DBS Bank, Mandai Wildlife Group, Millennium Hotels & Resorts, Singapore Post Limited, SMRT Corporation Ltd, Resorts World Sentosa and The Ascott Limited – have committed to recognise Green 100 as a qualifying sustainability credential in their procurement frameworks. Suppliers with Green 100 badges may be eligible for additional consideration in selected tender evaluations from these Queen Bees.
- The Government's green procurement framework sets aside up to 5% of evaluation points for sustainability-related considerations for large construction services tenders above S$50 million and ICT hardware tenders above S$10 million. The Government will recognise TR 149:2026 – and Green 100 badges issued in alignment with TR 149:2026 – as an additional, alternative pathway for firms to meet existing sustainability requirements. Full implementation details will be released to suppliers in due course.

Making Bronze accessible for SMEs

6 To reduce the time and needed by SMEs to meet Bronze, the Green 100 platform (www.Green100.sg) will integrate sustainability disclosure preparation and independent verification by third-party CABs into a single user journey[1]:

- **Simplifying data collection and preparation**: The platform will help SMEs automatically retrieve their utilities data from Corppass and uploaded invoices. The platform will also avail AI tools to help businesses develop sustainability strategies, policies and targets to strengthen sustainability readiness in line with TR149:2026.
- **Streamlining independent verification**: SMEs will be able to submit their completed information directly to a panel of accredited Green 100 CABs directly through the platform for independent assessment.

[1] This service will be available on the Green 100 platform from 20 November 2026.

- The Government will provide grant support to help eligible companies cover training, consultancy and first-time assessment costs. Further details will be made available in due course.

7 Beyond digital capabilities, SBF and Gprnt will work with Green 100 ecosystem partners to provide onboarding workshops, training programmes, and other capability-building initiatives to support SMEs at different stages of their sustainability journeys. Companies can access relevant training providers as well as details of upcoming workshops and programmes via the Green 100 website, or the Marketplace[2] on the Green 100 platform.

8 C3T will continue to expand the Green 100 movement by engaging more Queen Bees to participate and by strengthening recognition of Green 100 credentials, anchored on TR 149:2026 requirements, across more procurement frameworks. C3T strongly encourages companies to join the Green 100 movement and strengthen their sustainability capabilities and long-term competitiveness.
